MEANS OF CONTROL

1. Raw material: we have the specific person who in charge of purchasing. They supervise all the purchasing procedure in supplier's site to insure the quality of raw material can reach the requirements of EU Regulation.
2. Process: The production is divided by 6 main processes: Knitting, binding, dipping, drying, printing and packaging. 2 supervisors for each process are fixed to do the checking, daily records and production details are strictly controlled. Every operator has a unique working serial number which will be shown on the products to know who is responsible to the products, then the responsibility will be chased once occurred the problem on products. Finally, we will send the samples to CTC test EN388, EN ISO 21420...each year
3. The management of knitting:
The gloves will be knitted based on the client's requirements, after the gloves are knitted, the surface should be controlled as clean, no dirt, no defect; the finished products are placed separately in accordance with different colors and sizes; each dozen is binded with elastic bands, and sticked with the working serial number.
4. The management of binding:
The binding is done in according with the principle of smooth, straight, compact and threadless. After binding, the redundant thread for each glove has to be cutted in order to make the binding trim and perfect.
5. The management of dipping:
All gloves should be fully encased on the mould, especially in the space of finger, to avoid any interspace between the mould and glove. The operation of dipping is made according to client's requirement, the products must be dipped neither too deep nor too fleet, and the moulds should not shaked to avoid asymmetric thickness dipping material.
6. The management of drying and warming:
In the mass production, the constant temperature of the drying oven must be fixed, to avoid the gloves being still wet after drying or over dried to turn yellow; the speed of the mould in the route of drying oven is also fixed to insure the same quality in each batch.
7. The management of printing:
When doing printing of the client's marking or our own logo on the glove, the printing marking must be clear, trim, and not asymmetric. When the operator doing the printing, the eye sight must keep straight with the position of marking, and the printing mould must be perpendicular with the glove to insure the quality of printing.
8. The management of packaging:
Packaging is performed in accordance with client's requirement, we check if the size of the glove and the printing match the specific package before packaging, each glove must be well folded and put in order when packaging. If there is any filtering dipping, sticking dipping or peeling dipping products, they are forbidden to be packed, and the operator's responsibility will be chased by the working serial number shown on the glove.
Moreover, regarding the different products for different client, the products will be strictly separate to avoid mixing up. For the different client, even for the same products, we will setup separate groups to handle each client's order. At the same time, the number of packaging is well controlled according to the contract, less package or more packaging is forbidden.
